

- A1  
Amend.
- 1 c. forming an array output signal based on one or more modified output signals
  - 2 and zero or more unmodified microphone output signals.

**Unchanged claim 2:**

- 1 2. The method of claim 1 wherein steps a, b, and c, are performed a
- 2 plurality of times to obtain an adaptive array response.

A2  
[Amend claim 3:]

- 1 3. (Amended) The method of claim 1 wherein a region of space other
- 2 than the predetermined region of space includes sources of undesired acoustic
- 3 energy.

[Amend claim 4:]

- 1 4. (Amended) The method of claim 1 wherein undesired acoustic
- 2 energy impinges on the array from a direction within a region of space other than the
- 3 predetermined region of space.

**Unchanged claim 5:**

- 1 5. The method of claim 1 wherein the array has a plurality of directivity
- 2 patterns corresponding to a plurality of frequency subbands, one or more of the
- 3 plurality of directivity patterns including a null.

**Unchanged claim 6:**

- 1 6. The method of claim 5 further comprising the step of forming a
- 2 plurality of subband microphone output signals based on an output signal of a
- 3 microphone of the array, wherein the step of modifying output signals comprises
- 4 modifying the subband microphone output signals based on the one or more
- 5 evaluated parameters.

**Unchanged claim 7:**

- 1 7. The method of claim 1 wherein the array comprises a plurality of
- 2 cardioid sensors.

**Unchanged claim 8:**

- 1                    8. The method of claim 7 wherein the plurality of cardioid sensors  
2 comprises a foreground cardioid sensor and a background cardioid sensor and  
3 wherein the step of evaluating comprises determining a parameter reflecting a ratio  
4 of (i) a product of output signals of the foreground and background cardioid sensors  
5 to (ii) the square of the output signal of the background cardioid sensor.

**Unchanged claim 9:**

- 1                    9. The method of claim 7 wherein the plurality of cardioid sensors  
2 comprises a foreground cardioid sensor and a background cardioid sensor and  
3 wherein the step of evaluating comprises determining a scale factor for an output  
4 signal of the background cardioid sensor.

**Unchanged claim 10:**

- 1                    10. The method of claim 9 wherein the scale factor is determined based  
2 on an output signal of the background cardioid sensor and the array output signal.

**Amend claim 11:**

- 1                    11. (Amended) An apparatus for enhancing the signal-to-noise ratio of a  
2 microphone array, the array including a plurality of microphones and having a  
3 directivity pattern, the directivity pattern of the array being adjustable based on one  
4 or more parameters, the apparatus comprising:  
  
5        a. means for evaluating one or more parameters to realize an angular orientation  
6        of a directivity pattern null, which angular orientation reduces microphone  
7        array output signal level in accordance with a criterion, said evaluation  
8        performed under a constraint that the null be precluded from being located  
9        within a predetermined region of space which comprises a range of directions  
10       about the array which range reflects a predetermined directional variability of  
11       the desired acoustic energy with respect to the array;  
  
12       b. means for modifying output signals of one or more microphones of the array  
13       based on the one or more evaluated parameters; and  
  
14       c. means for forming an array output signal based on one or more modified  
15       output signals and zero or more unmodified microphone output signals.

29

**Amend claim 12:**

- 1 12. (Amended) The apparatus of claim 11 wherein a region of space  
2 other than the predetermined region of space includes sources of undesired acoustic  
3 energy.

**Amend claim 13:**

- 1 13. (Amended) The apparatus of claim 11 wherein undesired acoustic  
2 energy impinges on the array from a direction within a region of space other than the  
3 predetermined region of space.

**Unchanged claim 14:**

- 1 14. The apparatus of claim 11 wherein the array has a plurality of  
2 directivity patterns corresponding to a plurality of frequency subbands, one or more  
3 of the plurality of directivity patterns including a null.

**Unchanged claim 15:**

- 1 15. The apparatus of claim 14 further comprising means for forming a  
2 plurality of subband microphone output signals based on an output signal of a  
3 microphone of the array, wherein the means for modifying output signals comprises  
4 means for modifying the subband microphone output signals based on the one or  
5 more evaluated parameters.

**Unchanged claim 16:**

- 1 16. The apparatus of claim 14 wherein the means for evaluating  
2 comprises a polyphase filterbank.

**Unchanged claim 17:**

- 1 17. The apparatus of claim 11 wherein the means for modifying  
2 comprises a means for performing fast convolution.

**Unchanged claim 18:**

- 1                    18. The apparatus of claim 11 wherein the array comprises a plurality of  
2    cardioid sensors.

**Unchanged claim 19:**

- 1                    19. The apparatus of claim 18 wherein the plurality of cardioid sensors  
2    comprises a foreground cardioid sensor and a background cardioid sensor and  
3    wherein the means for evaluating comprises means for determining a parameter  
4    reflecting a ratio of a (i) product of output signals of the foreground and background  
5    cardioid sensors to (ii) the square of the output signal of the background cardioid  
6    sensor.

**Unchanged claim 20:**

- 1                    20. The apparatus of claim 18 wherein the plurality of cardioid sensors  
2    comprises a foreground cardioid sensor and a background cardioid sensor and  
3    wherein the means for evaluating comprises means for determining a scale factor for  
4    an output signal of the background cardioid sensor.

**Unchanged claim 21:**

- 1                    21. The apparatus of claim 18 wherein the scale factor is determined  
2    based on an output signal of the background cardioid sensor and the array output  
3    signal.

**Unchanged claim 22:**

- 1                    22. The apparatus of claim 11 wherein the array comprises a cardioid  
2    sensor and a dipole sensor.

**Unchanged claim 23:**

- 1                    23. The apparatus of claim 11 wherein the array comprises a  
2    omnidirectional sensor and a dipole sensor.

**R e m a r k s**

This amendment is submitted in response to an Office Action dated January 26, 1995. In the Action, the Examiner rejected each independent claim (1, 11) under 35 U.S.C. § 102(b) as anticipated by U.S. Patent No. 4,802,227 to Elko *et al.* (the
